Direct K=64 versus 16-coordinate initialization → K=64
First time step: identical starting state and objective
Saved checkpoints only; intermediate iteration losses were not recorded (job 6619857)
Case 1: direct 9 updates; staged 11 + 5
Case 2: direct 7 updates; staged 6 + 5
Case 3: direct 5 updates; staged 5 + 4
Case 4: direct 11 updates; staged 8 + 7
Case 5: direct 5 updates; staged 4 + 3
Case 6: direct 9 updates; staged 7 + 6
Loss = squared weighted residual norm
Cumulative solver updates (not elapsed time)
Shared starting loss
Direct K=64: finished
After 16-coordinate stage
After K=64 refinement
