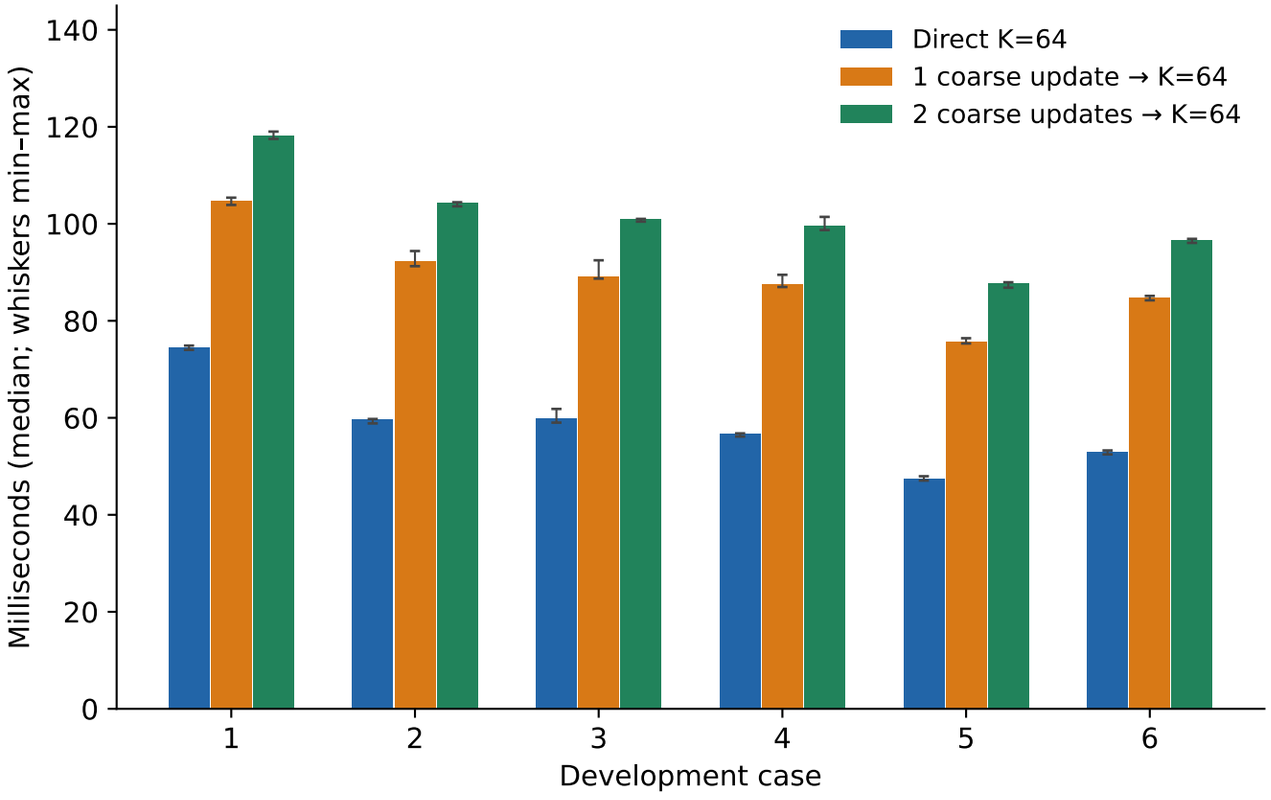
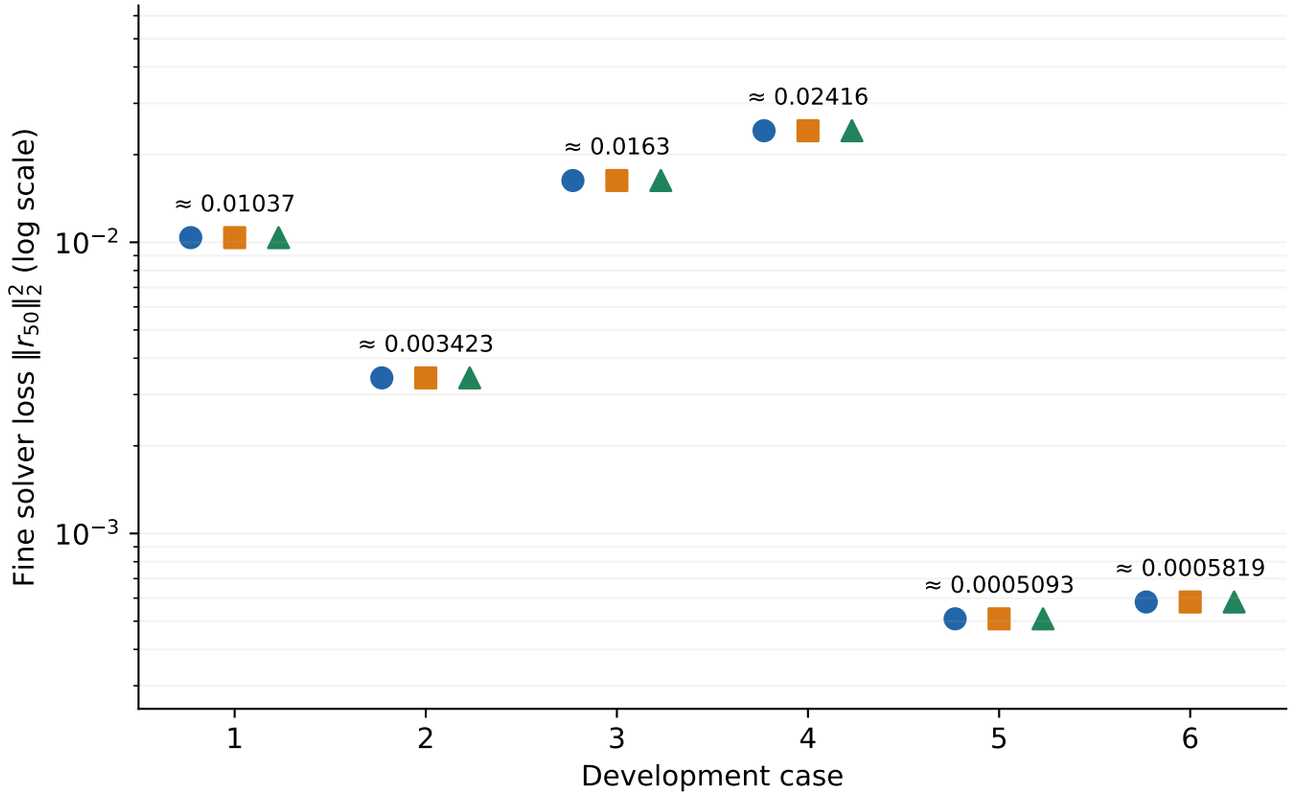
Burgers 16 → 64: runtime and recorded losses

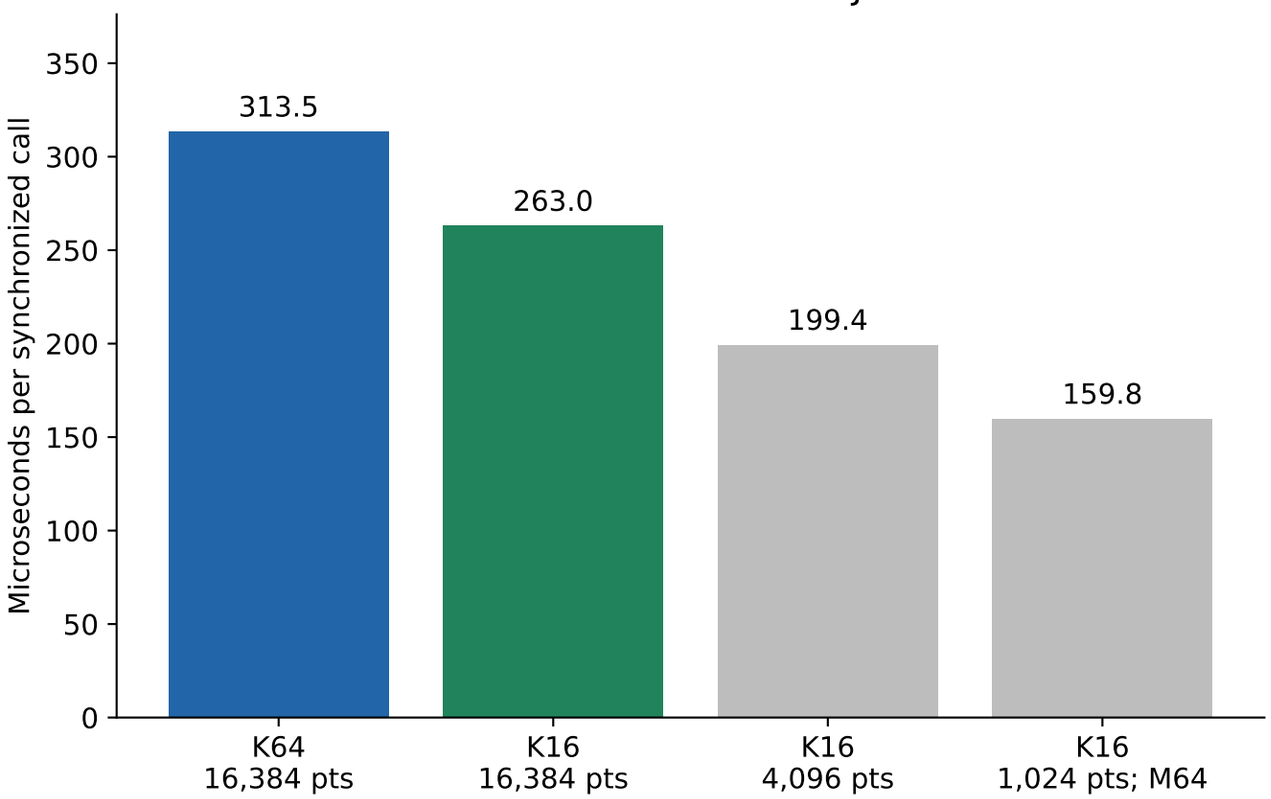
Completed solves: full-query runtime



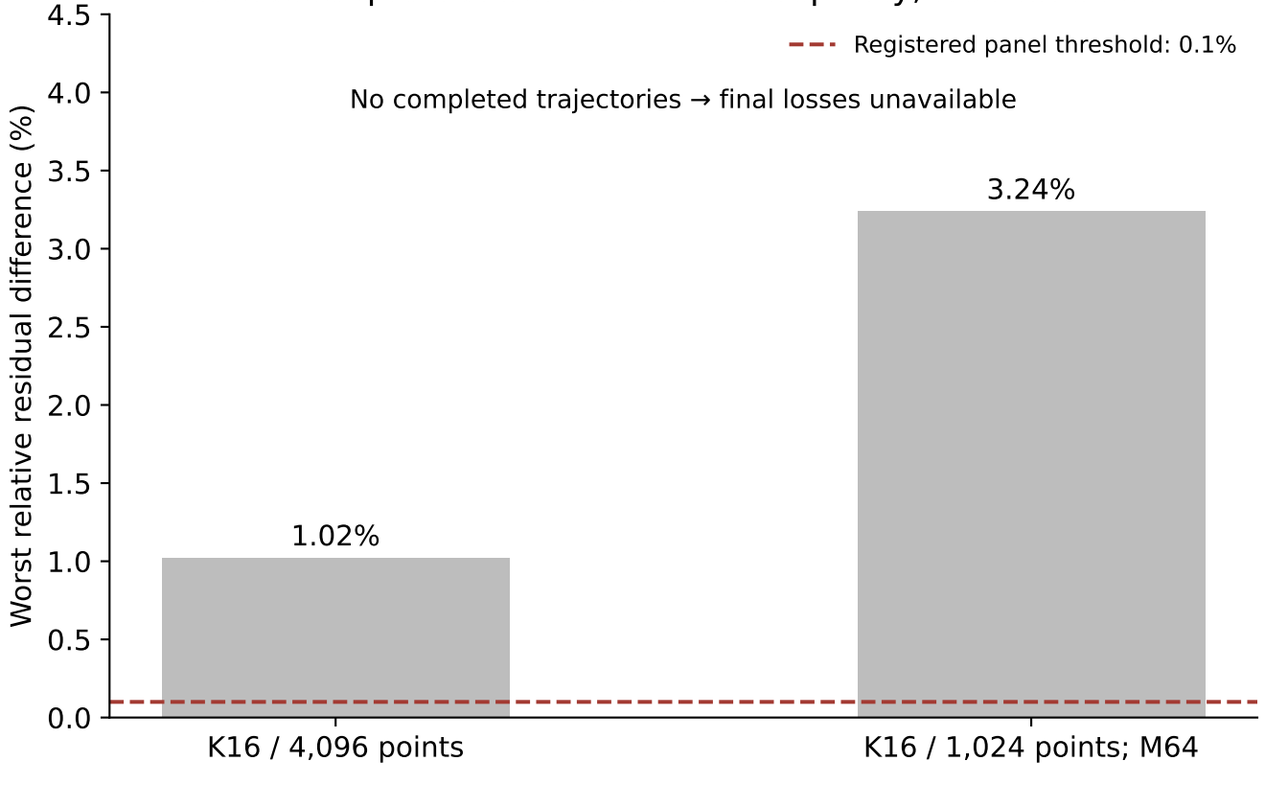
Completed solves: returned loss at t = 0.25



Isolated calculations: residual + Jacobian cost



Reduced quadrature: residual discrepancy, NOT final loss



Job 6647637 · Top: unchanged full-quadrature fine target; each trajectory uses its own accepted history.
Runtime: 7 repetitions/case. Loss: separate diagnostic trajectories with matching returned fields; no joint cost–accuracy claim.
Bottom: component timing at case1 initial state; residual discrepancies over 30 states against SAME-mode full quadrature. Loss is not reference-solution error.
