
Job 6651620 · 6 cases × 7 paired repetitions · same H200 GPU · actual timed-output losses
Fine target unchanged: K64, 16,384 quadrature points, 256 test modes. Coarse: K16, 1,024 points, 64 modes.
Loss is the weighted equation mismatch on each trajectory own history, not physical-reference error. Prior coarse-quadrature discrepancy remains.
